No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to myosin phosphatase targeting subunit 1-kinase, MYPT1 kinase (a subunit of the myosin light chain phosphatase SMPP-1M) or a portion of at least 5 consecutive amino acids. Also included are the nucleic acid encoding MYPT1 kinase, a MYPT1 kinase expression vector, a transformed host cell, an anti-MYPT1 kinase antibody, screening a test compound for anti-hypertensive activity and a kit for detecting the MYPT kinase comprising a compound that specifically binds to MYPT kinase disposed within a container means. MYPT1 kinase is useful for identifying compounds that inhibit hypertensive activity or which treat smooth muscle smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-SEP-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New myosin phosphatase targeting kinase, useful for identifying compounds that can treat hypertension or smooth muscle disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where compound, predicting to a database comprising SEQ ID 1-4925, where compound, predicting hepatotoxicity or the progression of a toxic effect. The method is useful for predicting at least one toxic effect of a compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or compound modulates in a cell, and identifying an agent that modulates the consect or compound modulates in a cell, and identifying an agent that modulates at compound modulates in a cell, and identifying an agent that modulates at compound modulates in a cell, and identifying an agent that modulates at cleast one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in cliver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the princed compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions of the compositions 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-JAN-2002;

The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                                                                                                                                                                                                                         The invention provides human and murine recombinant Zipper Interacting protein Kinase (ZIP-kinase) proteins. These proteins are serine/threonine kinases which bind the leucine zipper domain of transcription factor ATF4. Host cells containing vectors comprising the ZIP-kinase nucleic acids are used for the recombinant expression of the proteins. ZIP-kinase protein and DNA are useful as gene therapeutic agents against cancer, and as anti-cancer agents. The present sequence represents a DNA encoding a

830 Primers useful for synthesizing in genetic manipulation. full length cDNA clones and their use

8 SEQ ID NO 2874; 1380pp + Sequence Listing; English

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

                  The present sequence encodes human DAPK3. The expression level of the gene is used in the method of the invention. The specification describes a method of examining chronic myelogenous leukemia. The method comprises measuring the expression level of a gene selected from IFIT-2, LAGE-1, BAGE, DDB1, ETS2. PIASy, PIASx-alpha, PIASx-beta and DAPK3, or determining the expression profile of a group of genes including one or more of these genes, in a cell or tissue sample from a chronic myelogenous leukemia patient. The method is used for the diagnosis, treatment and prevention of chronic myelogenous leukemia patient.

These proteins are serine/threonine kinases which bind the leucine zipper domain of transcription factor ATP4. Host cells containing vectors comprising the ZIP-kinase nucleic acids are used for the recombinant expression of the proteins. ZIP-kinase protein and DNA are useful as gene therapeutic agents against cancer, and protein and DNA are useful as gene therapeutic agents against cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated polypeptide comprising any of 33 90-1273 amino acid sequences (I) given in the specification or its mature form, a sequence that is at least 95 % identical to (I), or a sequence comprising one or more conservative substitutions in the amino acid sequence of (I). The polypeptide is useful for preparing a composition for treating or preventing e.g., cancer. This sequence encodes a death associated protein kinase 3 (DAPK3) interacting protein associated with the identification of novel human proteins and their functions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                        The invention relates to a novel method for diagnosing a cancer in a complete, the method comprises determining, in a sample from the subject, the level of at least one polypeptide, where a higher level of the compared to the level of the polypeptide in a subject free of concer is indicative of cancer. The polypeptide is selected from any of the polypeptides encoded by the polynucleotides listed in the specification and polypeptides which are at least 70% homologous to the polypeptides. The method of the invention has cytostatic activity, and may have a use in gene therapy. The method is useful in identifying markers specific for one or several types of cancer, depending on the tissue origin, which may be used in numerous diagnostic and prognostic applications as well as cancer type-specific the acreets for therapeutic contervention. The compounds that modulate the activity of a tumour suppressor gene are useful in the treatment of cancer or as anti-cancer suppressor gene are useful in the treatment of cancer or as anti-cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human tumour

Primer sets for synthesizing polynucleotides, particularly the 56 length cDNAs defined in the specification, and for the detection diagnosis of the abnormality of the proteins encoded by the fullrly the 5602 full-detection and/or the full-length

Claim 8; SEQ ID NO 14925; 2537pp + Sequence Listing; English

CC Inagth cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC coligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprises a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC oplynucleotide which comprises a 3'-end sequence complementary to a
CC oligonucleotide which comprises a 3'-end sequence of the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC cDNAs easily without any specialised methods. AAH33166 to AAH33628 and
CC cDNAs easily without any specialised methods. AAH33165 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH33165 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH3363 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH3363 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH3363 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH3363 to AAH3363 represent
CC cDNAs easily without any specialised methods. AAH3363 to AAH3363 represent

The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways. Antisense oligonucleotides and compounds identified by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used as target molecules fit Anna Admilement

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             printed

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GluValSerIleLeuArgGluIleArgHisProAsnIleIleThrLeuHisAspValPhe

                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CI treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome CI that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-related diseases, especially CC ancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54920 and AAM82169 CC represent sequences used in the exemplification of the present invention

CC sequences. (1) is useful as hybridisation probes, polymerase chain of reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed compared to the sequence tags for identifying expressed compared to the sequence tags for identifying expressed compared to the sequence tags for identifying expressed compared to the sequence tags for identifying expressed compared to the sequence tags for identifying expressed compared to the sequence of the sequence of the sequence of the sequence of the sequence have applicated in the sequence of sites expressing (II). (I) and (II) are useful for treating disorders of the sequence have applications in consists. The composition of the sequence have applications in consists of the sequence of the statist to assess biodiversity cresponsible for genetic disorders or other traits to assess biodiversity conditions and sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this content did not appear in the printed specification, but was obtained in cettp-wipo.int/pub/published\_pct\_sequences. New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess Claim 1; SEQ ID NO 9265; 103pp; English. polynucleotide (I) and polypeptide

(II)
